Cherechi Daniella Orika

Senior Product Manager

cherechiorika@gmail.com linkedin.com/in/cherechi-orika orika-cherechi.github.io/portfolio

Summary

Senior Product Manager with 7+ years of experience building and scaling B2B SaaS, digital healthcare, enterprise platforms, marketplaces and AI-powered products. Experienced owning product strategy, roadmaps and the end-to-end product lifecycle across customer discovery, research, requirements, prioritisation, engineering delivery, release management and continuous improvement. Brings direct digital healthcare experience from Reliance Health, working on enterprise and member-facing healthcare products supporting 500+ organisations and 50,000+ employees across Nigeria, Egypt and Senegal, including workflows around HMO administration, healthcare benefits and access to care. Skilled in interviewing customers, analysing support issues and product data, simplifying complex workflows and making product trade-offs based on customer impact and business value. Combines strong product judgment, technical fluency and hands-on AI-assisted development to deliver intuitive products with measurable customer and commercial outcomes.

Key Impact

- Reduced enterprise onboarding at Reliance Health from one week to one day and manual implementation effort by 80%, supporting 500+ organisations and 50,000+ employees.
- Reduced onboarding-related support tickets by 35% by identifying recurring customer and data-validation problems and improving enterprise workflows.
- Increased SearchAtlas trial-to-paid conversion from 35% to 48% through personalised onboarding and AI-powered guidance.
- Contributed to approximately 70% lower trial churn through activation milestones, behavioural interventions and lifecycle automation.
- Increased SearchAtlas Growth-plan adoption by 18% and white-label monetisation by 60%.
- Improved Spritz's matching, trust and booking experience, contributing to 20% more completed bookings and approximately 60% customer retention.
- Built The Pattern House's connected acquisition and operations platform, supporting 125 leads, 23 active clients and over ₦21 million in revenue, while reducing the sales cycle from approximately 45 days to 15 days.

Core Skills

Product Strategy & Leadership: Product vision, product strategy, roadmap ownership, customer discovery, customer interviews, support-ticket analysis, competitor research, prioritisation, scope management, product trade-offs, MVP definition, success metrics and stakeholder management.
Healthcare & Enterprise Products: Digital healthcare, HMO administration, telemedicine platform experience, healthcare benefits access, enrollee management, employee records, eligibility, dependants, healthcare plans, provider access, benefits administration, enterprise onboarding and customer lifecycle management.
Customer Experience & Workflow Design: Customer journey mapping, booking and scheduling, CRM, lead management, customer communication, service workflows, checkout, payments, customer engagement, retention and workflow automation.
Product Development & Delivery: PRDs, product requirements, user stories, acceptance criteria, backlog prioritisation, sprint planning, engineering coordination, technical dependencies, UAT, QA, defect triage, release planning, release notes, GTM coordination and post-launch optimisation.
Product Analytics & Performance: PostHog, Mixpanel, Amplitude, SQL, GA4, Retool, product instrumentation, support insights, KPI dashboards, funnel analysis, cohort analysis, feature adoption, activation, engagement, retention, conversion and performance reporting.
AI-Powered Product Development: Claude Code, Cursor, ChatGPT, AI-assisted prototyping, AI-powered insights, recommendation systems, multi-agent workflows, prompt design, research synthesis, workflow automation and human-review processes.
Integrations & Technical Product Management: REST APIs, webhooks, third-party integrations, payment integrations, CRM integrations, multi-tenant SaaS, databases, RBAC, data validation, technical dependencies and system workflows.
Cross-Functional Leadership: Engineering, Design, QA, Sales, Customer Success, Support, Marketing, Operations, Finance and Data Science collaboration; product documentation, stakeholder communication, launch coordination and release communication.
Tools & Technical Stack: PostHog, Mixpanel, Amplitude, GA4, SQL, Retool, Microsoft Clarity, VWO, Jira, Confluence, GitHub, GitLab, Figma, Miro, Playwright, Cursor, Claude Code, ChatGPT, Next.js, TypeScript, Node.js, Neon PostgreSQL, Prisma, Better Auth, Cloudinary, Paystack, Stripe, Salesforce, HubSpot and Zoho.

Professional Experience

08/2025 – Present
Remote, US

Senior Product Manager, *SearchAtlas*

- Own product discovery, roadmap priorities and delivery across onboarding, activation, subscription monetisation, retention, multi-tenant agency workflows and AI-powered insights for a B2B SaaS platform.
- Lead product discovery across interconnected product areas, interviewing customers, reviewing customer feedback and investigating behavioural data to identify recurring problems and product opportunities.
- Own roadmap prioritisation across onboarding, activation, pricing, lifecycle engagement, agency workflows and AI capabilities, balancing customer impact, commercial value, engineering effort and technical dependencies.
- Led an AI-powered analytics experience that ranked tracked SEO signals by estimated impact and surfaced prioritised next-best actions. Defined the problem, ranking priorities, labels, success metrics and experiment design with Data Science and Engineering; daily active users increased by 40%.
- Redesigned first-session onboarding around a five-goal router and in-app AI Playbooks, matching user objectives to relevant product experiences. An A/B test against straight-to-dashboard onboarding increased trial-to-paid conversion from 35% to 48% and reduced first-session setup time from approximately five minutes to under two.
- Owned pricing, packaging, plan-comparison and upgrade experiments across subscription plans. Prioritised changes based on customer decision friction and commercial outcomes; Growth-plan adoption increased by 18%, while changes to the white-label offer increased monetisation by 60%.
- Combined milestone-based onboarding with behaviour-triggered emails and in-app interventions for users who missed milestones or became inactive. These initiatives contributed to approximately 70% lower trial churn; lifecycle improvements also increased trial email open rates by 20% and win-back conversion from 8% to 12%.
- Designed the white-label agency experience around parent-child account structures, role-based permissions, seat management, branding and plan-based feature gating, enabling agencies to manage multiple client accounts and control their experiences.
- Built and deployed a live product-health dashboard connected to Retool, consolidating revenue, activation, churn, DAU/WAU, feature adoption and subscription performance into a shared reporting view for product and leadership decisions.
- Used PostHog, Mixpanel, Microsoft Clarity, VWO, GA4, SQL and Stripe subscription data to investigate customer behaviour, identify product friction, evaluate experiments and guide post-launch improvements.
- Coordinated Engineering, Design, Data Science, Marketing, Sales and Support through requirements, acceptance criteria, technical dependencies and release planning. Owned release notes and GTM coordination for white-label and onboarding releases, aligning launch positioning, stakeholder readiness, customer communications and post-launch measurement.
- Used Cursor, Claude Code and ChatGPT for technical exploration, rapid prototyping, documentation and workflow automation.

11/2024 – 09/2025
Remote

Product Manager, Enterprise Sales, Growth & Delivery, *Reliance Health*

- Owned enterprise onboarding, workforce administration and customer-lifecycle products within a digital healthcare platform supporting 500+ organisations and 50,000+ employees across Nigeria, Egypt and Senegal. The wider healthcare experience provides members with access to HMO benefits, eligible healthcare providers, digital identification and telemedicine services.
- Owned enterprise healthcare administration experiences spanning employee and enrollee records, eligibility, dependants, healthcare plans, workforce changes, benefits administration and enterprise access, supporting the delivery and administration of healthcare benefits.
- Worked with enterprise customers, Sales, Customer Success and regional teams to understand customer problems, review recurring support issues and identify friction across onboarding, eligibility, benefits access, administration and renewals.
- Analysed recurring onboarding-related support problems, identified issues associated with manual processing and incomplete or invalid employee information, and prioritised product improvements addressing the underlying workflow and data-validation problems.
- Reworked manual enterprise onboarding into connected self-service workflows covering bulk employee imports, automated data validation, plan and region assignment, account provisioning, employee visibility, activation/deactivation, role-based access and approvals.
- Reduced onboarding from one week to one day and manual implementation effort by 80%, enabling faster enterprise activation and reducing dependence on internal implementation teams.
- Introduced validation and exception handling for workforce imports to identify incomplete or invalid employee information before commitment, reducing onboarding-related support tickets by 35%.

- Built customer-health reporting across enrolment, utilisation, renewals, retention and workforce activity. Reporting was adopted by 62% of enterprise clients, supporting customer reviews and renewal decisions.
- Improved checkout and onboarding journeys, reducing drop-offs by 15%. Tiered packaging and in-app renewal triggers contributed to an 18% increase in ARPU and a 28% increase in paid engagement.
- Prioritised competing customer requests and operational improvements across onboarding, administration, checkout and renewals, balancing customer impact, business requirements, data quality and engineering dependencies.
- Led cross-functional delivery across two squads, coordinating Engineering, Design, QA, Sales, Customer Success and regional teams around requirements, priorities, dependencies and product delivery.
- Owned release planning and release notes for onboarding and administration improvements, coordinating testing, readiness, rollout and GTM communication with Product Marketing, Sales and Customer Success. Ensured customer-facing teams understood feature changes, updated workflows and post-launch support requirements.

07/2023 – 02/2025
Remote, US

Product Manager, B2B SaaS (Contract), *Vertex Software Corporation*

- Managed product development across a portfolio of 100+ localised websites spanning 60+ countries and 30+ languages, balancing regional requirements, platform consistency, security and stability.
- Led a Salesforce integration that consolidated client and user records into a connected workflow, creating a more reliable source of truth and reducing funnel drop-off by 60%.
- Owned TenexFleet, a two-sided vehicle-rental marketplace covering renter vehicle discovery and booking alongside fleet-provider listing and management workflows.
- Worked with Engineering on integrating Borrow identity, credit and query-check APIs into renter onboarding, defining workflow requirements and expected behaviour to support verification before booking confirmation.
- Coordinated security improvements that reduced phishing risk by 40%, balancing platform safety with usability and stability.
- Supported AI/LLM feedback and onboarding improvements for Calvary through structured user feedback and prompt-testing workflows, contributing to 60% higher retention and 12% higher new-user activation.
- Prioritised technical and customer-facing improvements across platform requirements, translated decisions into delivery specifications, coordinated release planning and release notes, supported validation and communicated changes to relevant stakeholders.

04/2023 – 10/2024
Remote, US

Founding Product Manager, *Spritz*

- Joined at concept stage, before code had been written, and translated a founder's idea for a two-sided cleaning-services marketplace into an MVP through customer discovery, market validation and rapid iteration.
- Conducted customer interviews, competitive research and continuous feedback with homeowners and cleaners. Built a beta waitlist of approximately 1,000 sign-ups, onboarded the first 50 early adopters in launch week and conducted daily user calls to identify friction and prioritise improvements.
- Defined the initial MVP around registration, cleaner onboarding, discovery, matching, booking, scheduling and payments, making scope trade-offs to prioritise the essential customer and provider workflows before expanding the product.
- Owned cleaner-side workflows for profile and service management, pricing, availability, scheduling, booking coordination and customer communication.
- Designed the homeowner experience across discovery, matching, trust, booking, scheduling, messaging and reviews. Matching considered location, service type, price and ratings, with fallback recommendations when supply was limited.
- Introduced provider portfolios, ratings, reviews and identity-verification signals to help homeowners evaluate providers and make more confident booking decisions.
- Built a daily route-optimisation map to sequence provider bookings into an ordered route, supporting service delivery planning.
- Built a service-based pricing calculator and designed an in-app wallet and payout workflow in response to provider feedback, improving how cleaners managed earnings and received payouts. Provider satisfaction increased by 15%.
- Coordinated the full marketplace release, including product readiness, cleaner and homeowner onboarding, release communications, beta launch activities, release notes and post-launch feedback.
- Delivered matching, trust and booking improvements that contributed to 20% more completed bookings and approximately 60% customer retention.

- Established structured epics, issues, acceptance criteria, Figma references and Loom walkthroughs to communicate customer problems, expected behaviour, constraints and scope to Engineering and Design.

02/2021 – 03/2023
Remote, Nigeria

Product Manager, Enterprise & Growth, *Decagon*

- Owned employer-facing products for 100+ enterprise customers across talent discovery, candidate assessment, hiring workflows, contracts and payments within an EdTech and talent marketplace environment.
- Owned product improvements across talent discovery, candidate evaluation, assessments, hiring workflows, contracting and payments, using customer feedback, business priorities and technical dependencies to prioritise roadmap work.
- Built skills-based candidate discovery and ranking using structured profiles, role requirements, programming languages and vetting scores, helping employers shortlist candidates in under one day instead of several days of manual review.
- Led Scorecard assessment and cohort-scoring workflows that enriched candidate profiles with verified skill information and reduced time from enrolment to placement readiness by 70%.
- Introduced a weekly Top-5 cohort leaderboard that made performance progress more visible, increasing adoption and retention by 35%.
- Integrated e-signature into contract-to-payment workflows, increasing adoption of the end-to-end hiring workflow by 17%.
- Automated HubSpot sales-pipeline workflows, contributing to 30% higher enterprise adoption and 40% fewer support tickets.
- Coordinated product releases and release notes across employer-facing improvements, aligning Engineering, Sales and Customer Success around feature scope, launch readiness and customer-facing changes.
- Partnered with hiring teams, Sales, Customer Success and Engineering to identify customer problems, prioritise competing requirements and deliver commercially important product improvements.

02/2019 – 01/2021
Remote, Nigeria

Associate Product Manager, *The Fepreneur*

- Validated a digital marketplace opportunity for female SMB entrepreneurs through user interviews, market research and competitive analysis.
- Translated customer insights into product features and growth priorities, contributing to marketplace growth from 0 to 782 users in under six months.
- Shipped listing visibility and promotion tools that improved product discovery and were associated with a 30% increase in user sales.
- Coordinated iterative product delivery with Marketing, Customer Success and Engineering, including release planning, release communications and customer feedback.

Selected Product & AI Projects

2025 – Present

Product Lead & Builder, *The Pattern House*

- Personally scoped, designed, built, deployed and integrated a connected B2B client-management and manufacturing operations platform.
- Identified fragmented client, sales and production processes and mapped the full customer journey from website enquiry and lead qualification through discovery, technical-pack review, quotation, negotiation, order confirmation and production delivery.
- Replaced fragmented WhatsApp and spreadsheet lead management with structured enquiry capture, qualification stages, assigned ownership, follow-up actions and CRM workflows connected to HubSpot.
- Built an internal system of record connecting clients, enquiries, quotations, orders, sourcing, purchasing, inventory, production, quality control, finance and delivery.
- Designed client-management workflows that connected customer requirements, quotation progress, order information and production handoffs, improving visibility into the work required to fulfil each order.
- Connected HubSpot, Zoho Mail, Zoho Cliq, GA4 and Google Tag Manager to support lead management, client communication, internal notifications and performance visibility.
- Prioritised product and operational improvements across Sales, Client Operations, Production, Sourcing, Tailors, QC and Delivery, balancing customer commitments, process dependencies and business priorities.
- Owned product release planning, launch readiness and release communications for the website, enquiry workflows and internal operations platform, coordinating rollout and adoption across the business.
- Established reporting and recurring performance reviews across Sales, Client Operations, Production, QC, Finance, Administration and Marketing.

- Generated more than 25 qualified inbound opportunities and approximately ₦5 million in revenue during the first month of commercial launch. Since launch, the business has recorded 125 leads, 23 active clients and more than ₦21 million in revenue. The sales cycle reduced from approximately 45 days to 15 days.
- Used AI-assisted development to drive product requirements, UX, implementation, testing, deployment and continuous improvement.

2024 – Present

Product Lead & Builder, *Ché Orika / CO Group*

- Personally scoped and built a multi-brand e-commerce and operations platform connecting storefront activity with brand-specific administration.
- Designed a shared administration experience for product catalogues, variants, inventory, orders, checkout, payments, invoices, sales records and supplier follow-ups.
- Designed brand-scoped data, membership-based access, permissions and a brand switcher for users managing multiple businesses.
- Built dashboards covering revenue, orders, pending fulfilment, low stock, best sellers and recent customers.
- Implemented personalised product recommendations informed by browsing behaviour and previous views, alongside back-in-stock notifications to support customer re-engagement.
- Owned product release planning and GTM for the commerce experience, coordinating storefront readiness, product catalogue setup, inventory, checkout, payment workflows, launch communications and post-launch improvements.
- Built and validated the platform using Next.js, TypeScript, Node.js, Neon PostgreSQL, Prisma, Better Auth, Cloudinary and Paystack.
- Used Cursor, Claude Code and ChatGPT to accelerate implementation, investigate technical dependencies and test working product flows.

2025 – Present

Product Lead & Builder, *Personal AI Operating System*

- Designed a seven-agent AI operating system spanning Product, Engineering, Design, Operations, Growth, Customer Success and QA.
- Defined agent responsibilities, context boundaries, handoffs, execution guardrails, human-review checkpoints and release gates.
- Built AI-assisted workflows for research synthesis, requirements, user stories, backlog grooming, sprint planning, QA preparation, documentation and release notes.
- Integrated Claude Code, Cursor, ChatGPT, OpenAI APIs, Anthropic APIs, MCP servers, HubSpot, Resend and Zoho into repeatable product and operational workflows.

2026 – Present

Product Owner, *AI Job Hunt Cockpit*

- Built an AI-assisted application for job discovery, role-fit evaluation, tailored application materials and application tracking.
- Prototyped with Next.js, Cursor, Claude Code and Playwright, iterating on prompts, workflow logic and evaluation criteria to improve output quality.

2022 – 2024

Product Owner, *Fentbook*

- Led product discovery and specifications for an SMB financial-management product covering invoicing, expenses, payments, reconciliation and reporting.
- Defined Paystack and Sterling Bank API workflows, transaction-state validation, analytics, staging validation, defect triage, release planning and production-readiness requirements.

Education

2016 – 2020

B.Eng / Electrical & Electronics Engineering, *Federal University of Technology Owerri*

Certificates

- Product Management by LinkedIn Learning
